Blue Line Intrusion Detectors

Keeping an eye on your property.

Reliable security offering a customised,
modular solution for your premises.

BOSCH

Invented for life

Whether you own a home or you run a business, you need security you can rely on. **Bosch's Blue Line Intrusion Detectors** keep that much-needed eye on your property.

Say good-bye to false alarms

What's the worst part of having the wrong security equipment? The annoyance of false alarms which waste your time and money every time you have to reset your system or contact your monitoring service. Worse yet, you may have to drive to your business to verify the alarm and even deal with the police if they've been dispatched. All this adds up to having security you can't rely on.

With Blue Line detectors you get the assurance of advanced First Step Processing (FSP). This top-of-the-line technology intelligently analyses motion and differentiates human targets from other sources of motion such as a moving curtain or air blowing through an air conditioning vent. Depending on the Blue Line model you choose, your detector can even rule out motion from your family pets or a guard dog, so you only handle valid alarms, not nuisance calls that undermine your faith in your security.

Your Blue Line detector will also adjust to its environment. By compensating for temperature fluctuations, you're guaranteed optimal performance regardless of the room conditions. The detector is also sealed to prevent air or insects from entering, so you don't have to worry about servicing your detector.

When you choose a Bosch Blue Line detector, you're putting over 30 years of intrusion detection know-how to work for you. Put your trust - and your property - in the security leader, Bosch.

Choosing the Detector that's right for you

Every premises has different requirements - that's why Bosch offer a range of Blue Line detectors to choose from, so you can be certain your particular needs are met.

Standard PIR Detector - ISM-BLP1

This hard-working passive infrared (PIR) detector is the perfect balance of performance and economy. Use this model when you don't have the extra challenges of animals or overly active areas.

Quad PIR Detector - ISM-BLQ1

You get two PIR detectors in one unit. For an alarm to be activated, both PIRs must signal an alarm. If you have regular motion in one part of the room that would cause a standard, single PIR detector to alarm repeatedly, using a quad will give you the reliability you need to avoid false alarms.

TriTech® PIR/Microwave Detector - ISM-BLD1-P

This model combines standard PIR technology with microwave detection technology and advanced signal processing, which provides the best analysis of disturbances. TriTechs also offer pet/animal immunity up to 45kgs, allowing your pets to be safe inside the home while the security system is armed.

More than just a detector

Other than a sleek design and that unique blue light, what makes Blue Line different? Modularity.

With other brands, you have to buy special detectors to get additional capabilities. Not with the Bosch Blue Line. Our detectors come with a range of options to upgrade or enhance your security to meet your special needs.

Add one of these modules to any Blue Line detector to enhance your security.

Camera modules - ISM-BLA1-CM-C (mono) & ISM-BLA1-CC-P (colour)

Blue Line camera modules come in colour or monochrome versions. Your camera can continuously record or set it to activate at 15 or 90 seconds after an alarm is triggered, so you get the video information you need.

Sounder module - ISM-BLA1-SM

Another Blue Line add-on is the Sounder module. Aesthetically designed, the sounder attaches to the detector to reduce the amount of security hardware installed in your property, as well as the amount of wiring that has to be run and the number of holes in the walls.

Night Light module - ISM-BLA1-LM

The LED "night light" module is perfect for providing lighting when you need it. Motion activated, the light comes on when you're in the room or hallway. You select the brightness, so you can softly illuminate a hallway at night to find the way to the bathroom, or shine a brighter light on the way to the kitchen for a late night snack. Should the power go out the night light module is backed up by the battery in your security system, so you have lighting when you need it most. You can also turn this module on or off as you desire. The convenience of this module will more than offset the investment.

Now or later – the choice is yours

Are you or your budget not ready for enhanced security? It's OK – install your Blue Line detector now and add on later. This flexibility will make Blue Line the right solution for you today, and will help keep it your detector of choice for years to come.

Security where you need it, where you want it

Blue Line detectors offer an attractive style along with options to install yours on either the ceiling or the wall. Neutral in colour, they blend into their environment.

Flexibility, dependability, modularity

Three important reasons why Blue Line is the solution you need for your security. To learn more, speak with your local Bosch security dealer.
